EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Terryence Chapman on 27 October 2008.

The application has been amended as follows: Cancel claims 1-4 and 8.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

a. Here, the closest prior art is considered to be Yamanaka et al. Yamanaka et al disclose all of the features of the invention with the exception of the carbon dioxide supply source. As discussed during prosecution, Yamanaka et al suggest adding an electrolyte to the high purity water entering the anode chamber, and give a large number of suggestions for the electrolyte at col. 11, lines 33-50. Of note is that Yamanaka et al is silent with respect to the electrolyte addition being for the purpose of increasing electrolyzing efficiency. Among the large number of suggestions for electrolyte given by Yamanaka et al is carbonic acid (otherwise known to be carbon dioxide dissolved in water). However, the only specific examples given by Yamanaka et al utilize a dilute hydrochloric acid as the electrolyte.

Art Unit: 1795

b. However, through Applicant's declaration under 37 CFR 1.132, comparison has been made to the amount of ozone produced by the electrolytic cell (indicative of the efficiency of the electrolysis process) when using carbon dioxide (present invention) and hydrochloric acid (specific examples of Yamanaka et al). The comparison shows that using carbon dioxide (i.e.-carbonic acid) results in more than a three fold increase in the concentration of ozone produced when compared to the use of hydrochloric acid. Since Yamanaka et al do not disclose that the electrolyte choice affected the ozone production efficiency, one of ordinary skill in the art would have expected each of the different electrolytes of Yamanaka et al to have produced ozone at approximately the same efficiency. Therefore, Applicant's comparison data is persuasive to show that the use of carbon dioxide as the electrolyte (and, therefore, use of a carbon dioxide supply source in the claimed apparatus) results in an unexpected result of increased ozone production.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
